

Safari® INSECTICIDE

Emerald Ash Borer Control

Safari® Insecticide is a new generation, super-systemic neonicotinoid with quick uptake and knockdown of pests – including mealybug, leafminer, and scale.

Safari was granted an SLN in Ohio and Illinois for the control of Emerald Ash Borer (EAB), an invasive pest attacking ash trees.

Safari, when applied as a bark spray for EAB control offers:

- Super-systemic activity
- Fast acting residual control throughout the tree
- Unmatched ease of application

Insect	Application Method	Application Rate
Emerald Ash Borer (SLN in Ohio & Illinois only)	Bark Treatment	Add the following to 1 gallon of water: 12 oz of <i>Safari</i> 3 oz of Pentra Bark

One gallon of spray solution will treat approximately 36 to 40" of tree diameter when measured at 4.5' above the soil line.

APPLICATION INSTRUCTIONS:

- ◆ Preferred application timing is early May, but an application can be made throughout the growing season.
- ◆ Spray solution on tree trunk from 4" to 60" above the soil surface,
- ◆ Adjust sprayer nozzle to uniformly distribute spray solution on bark over the entire circumference of the tree trunk.
- ◆ Wet bark with spray solution just to the point of saturation and run-off to the soil surface.
- ◆ Use low pressure sprayer operated at 10 to 20 PSI to avoid damage to the trees and splash-back or drift.
- ◆ Do not apply to wet bark, during rainfall, or if rain is expected within 12 hours after application.
- ◆ Do not make more than one application of *Safari* per year.
- ◆ Do not apply more than 2.7 lbs of *Safari* per acre per year.

Follow all applicable directions, restrictions and precautions on the EPA registered label. SLN labeling must be in the possession of the user at the time of application.

EPA Ohio SLN No.: OH-070002

EPA Illinois SLN No.: IL-070004
